

The Decalogue of Scientific Oral Presentations

Alvaro Soto

Computer Science Department, PUC

1 The mother of the tips

The main goal of an oral presentation is not to **present** information or ideas

1 The mother of the tips

The main goal of an oral presentation is not to **present** information or ideas

The main goal is to **communicate** a message

1 The mother of the tips

The main goal of an oral presentation is not to **present** information or ideas

The main goal is to **communicate** a message

You should **know your audience**

1 The mother of the tips

The main goal of an oral presentation is not to **present** information or ideas

The main goal is to **communicate** a message

You should **know your audience**

Every aspect or content of the presentation **must aim** to effectively communicate this message to the target audience

- 2 Plan carefully the structure of your presentation

2 Plan carefully the structure of your presentation

- Tell a story. You should have a script

2 Plan carefully the structure of your presentation

- Tell a story. You should have a script
- Make your talk attractive and **memorable**: Ex.
"Information for Scientific Oral Presentations"
VS
"Key Tips for Scientific Oral Presentations"
VS
"The Decalogue of Scientific Oral Presentations"

2 Plan carefully the structure of your presentation

- Tell a story. You should have a script
- Make your talk attractive and **memorable**: Ex.
"Information for Scientific Oral Presentations"
VS
"Key Tips for Scientific Oral Presentations"
VS
"The Decalogue of Scientific Oral Presentations"
- In general, a scientific presentation in a AI or CS conference is short (10-15 mins, conference format). Plan your presentation accordingly

2 Plan carefully the structure of your presentation

- Make your talk attractive and **memorable**: Ex.
"Information for Scientific Oral Presentations"
VS
"Key Tips for Scientific Oral Presentations"
VS
"The Decalogue of Scientific Oral Presentations"
- In general, a scientific presentation in a AI or CS conference is short (10-15 mins, conference format). Plan your presentation accordingly
- Time and pacing: stick to the plan and distribute minutes properly across sections

3 Typical structure for a scientific talk

3 Typical structure for a scientific talk

- What is the problem to tackle

③ Typical structure for a scientific talk

- What is the problem to tackle
- Why is this important

3 Typical structure for a scientific talk

- What is the problem to tackle
- Why is this important
- What is the current state-of-the-art

3 Typical structure for a scientific talk

- What is the problem to tackle
- Why is this important
- What is the current state-of-the-art
- What is the new method or proposal

3 Typical structure for a scientific talk

- What is the problem to tackle
- Why is this important
- What is the current state-of-the-art
- What is the new method or proposal
- Results: findings that support or reject your proposal

3 Typical structure for a scientific talk

- What is the problem to tackle
- Why is this important
- What is the current state-of-the-art
- What is the new method or proposal
- Results: findings that support or reject your proposal
- Conclusions

3 Typical structure for a scientific talk

- What is the problem to tackle
- Why is this important
- What is the current state-of-the-art
- What is the new method or proposal
- Results: findings that support or reject your proposal
- Conclusions
- Future avenues of research

3 Typical structure for a scientific talk

- What is the problem to tackle
- Why is this important
- What is the current state-of-the-art
- What is the new method or proposal
- Results: findings that support or reject your proposal
- Conclusions
- Future avenues of research
- Critical analysis (this is for this class)

3 Typical structure for a scientific talk

 - What is the current state-of-the-art
 - What is the new method or proposal
 - Results: findings that support or reject your proposal
 - Conclusions
 - Future avenues of research
 - Critical analysis (this is for this class)
-
- Strong opening: motivate with a question, story, or example.
 - Clear closing: restate the main contribution or takeaway.

④ Establish contact with audience

For an effective communication with the audience, it is highly relevant to establish contact with them

4 Establish contact with audience

For an effective communication with the audience, it is highly relevant to establish contact with them

- Look at the audience: face the audience and establish eye contact

④ Establish contact with audience

For an effective communication with the audience, it is highly relevant to establish contact with them

- Look at the audience: face the audience and establish eye contact
- Talk to them, speak loudly and with confidence

4 Establish contact with audience

For an effective communication with the audience, it is highly relevant to establish contact with them

- Look at the audience: face the audience and establish eye contact
- Talk to them, speak loudly and with confidence
- Movement in the space can help engagement. Be careful with body posture, gestures

4 Establish contact with audience

For an effective communication with the audience, it is highly relevant to establish contact with them

- Look at the audience: face the audience and establish eye contact
- Talk to them, speak loudly and with confidence
- Movement in the space can help engagement. Be careful with body posture, gestures
- Plan the pauses and emphasis. Do not speak in a flat manner. Avoid reading from slides

4 Establish contact with audience

For an effective communication with the audience, it is highly relevant to establish contact with them

- Look at the audience: face the audience and establish eye contact
- Talk to them, speak loudly and with confidence
- Movement in the space can help engagement. Be careful with body posture, gestures
- Plan the pauses and emphasis. Do not speak in a flat manner. Avoid reading from slides
- Make the audience feel close, they should feel your **genuine** interest to communicate your message. You are the **leader** of your talk.

- 5 Consider the audience background and knowledge

5 Consider the audience background and knowledge

Prepare your message according to the audience

5 Consider the audience background and knowledge

Prepare your message according to the audience

But not only the background and knowledge, also the **main interest** of your audience. They should **care** about your message

- ⑥ Keep a common frame of attention with the audience

6 Keep a common frame of attention with the audience

Make sure the audience is **focusing** on the same idea as you

6 Keep a common frame of attention with the audience

Make sure the audience is **focusing** on the same idea as you

The audience should **easily connect** your discourse with your supporting material (slides, videos, etc)

- 7 Slides and multimedia should **help** to support your message

7 Slides and multimedia should **help** to support your message

All material should help, complement your story, but not replace you. This is important to plan your slides

7 Slides and multimedia should **help** to support your message

All material should help, complement your story, but not replace you. This is important to plan your slides

- Clear figures. Use them.

7 Slides and multimedia should **help** to support your message

All material should help, complement your story, but not replace you. This is important to plan your slides

- Clear figures. Use them.
- Suitable font size

7 Slides and multimedia should **help** to support your message

All material should help, complement your story, but not replace you. This is important to plan your slides

- Clear figures. Use them.
- Suitable font size
- Avoid too much text, it does not facilitate a common focus between you and the audience

7 Slides and multimedia should **help** to support your message

All material should help, complement your story, but not replace you. This is important to plan your slides

- Clear figures. Use them.
- Suitable font size
- Avoid too much text, it does not facilitate a common focus between you and the audience
- Be careful with graphs, in particular, to explain its axes and relevant information

7 Slides and multimedia should **help** to support your message

All material should help, complement your story, but not replace you. This is important to plan your slides

- Clear figures. Use them.
- Suitable font size
- Avoid too much text, it does not facilitate a common focus between you and the audience
- Be careful with graphs, in particular, to explain its axes and relevant information
- Good contrast with respect to the slide background, avoid fancy colors

8 Budget the information content: usually “less is more”

- Aim for one main message for each slide

8 Budget the information content: usually “less is more”

- Aim for one main message for each slide
- Recall limitations of human attention (system 1 vs system 2 processes in human brains)

8 Budget the information content: usually “less is more”

- Aim for one main message for each slide
- Recall limitations of human attention (system 1 vs system 2 processes in human brains)
- You do not have to show all your knowledge, the goal is to communicate the main message of your talk
